

Campsite Design and Conceptual Building Renderings

Master Plan- Progress continues on the \$160-million master plan which was designed to address major upgrades and deferred maintenance needs at recreational facilities and marinas. Although upgrades have begun, the major work is still in the design stages. Renderings for the new facilities have been developed to help establish the infrastructure needs of each park and to layout the locations for underground utilities, roadways and trails.

Take a look at campsite design and conceptual building renderings which will begin to appear at MWCD facilities in the upcoming years:

CAMPSITES

RV Camping: Campsites will be redesigned so that each site will be as level as possible with a concrete pad for RV and vehicle parking and an adjoining pad for outdoor living. Landscaping will help provide each campsite a feeling of its own defined space, providing a measure of privacy and separation.

Full hookup campsites will have 50-75 amp electric service, water, sewer and picnic table. Partial hook-up sites will include 50 amp electric service, water and picnic table. Secluded RV campsites will also be available. These sites will have intimate, wooded remote locations, setback from the lake and traffic. These sites feature 50 amp electric, water and picnic table.

Conceptual design of a back-in campsite

Conceptual Design of a pull-through campsite

Tent Camping: Tent campsites as well as primitive sites will be situated in a comfortable setting, framed by the woods. This will provide a feeling of being nestled into the landscape with amenities located nearby. Primitive campsites will be generally remote with amenities nearby.

Tent campsites will include a square tent pad, parking for one vehicle, picnic table, pedestal grille and fire ring.

Buildings

Welcome Center: The welcome center will be the first building guests see as they enter the campground. It will include the gate house, registration and check-in, retail area, office and storage spaces as well as meeting spaces to be utilized year round.

Conceptual Design of Welcome Center:

Restroom/ Shower Facilities: Each shower house will have two main restroom areas, with separated family-style washrooms. Large alcoves will provide a secured, covered area as well as vending.

Conceptual Design of Restroom:

Conceptual Design Shower Facility Floor Plan:

Activity Center: The activity center will be designed as the hub of the campground featuring an indoor/outdoor pool, snack bar, nature center, meeting spaces, game/ rec room and multi-purpose court area.
